codeweavers

Overview

CodeWeavers is the worldwide leader of Wine development. Wine is a free and open source software project that allows applications designed for Windows to run on Mac and Linux without having to install a Windows operating system, without having to use a virtual machine and without having to reboot. Founded in 1996, CodeWeavers sells a commercial version of Wine called CrossOver. CodeWeavers specializes in two areas of business: Windows compatibility for Mac and Linux and porting Windows programs to work like native Mac and Linux software.

Key Facts

Founded in 1996

Products

CrossOver Mac is the easiest and most affordable way to run Windows software on Mac, without the extra cost of a Windows license, without a virtual machine and without rebooting.

CrossOver Linux allows you to easily run Windows software without having to install the Windows operating system or have the overhead of a full emulator.

Services

Porting your Windows application to Mac or Linux can be a quick and effiecent with CrossOver. Reach new markets without the hassle and expense of maintaining an ew codebase. With CrossOver no WIndows operating license is required and no source code change is required. Contact us for more information.
