CrossOver Office™ allows you to run many Windows applications under Linux, without needing a Microsoft operating system license. CrossOver includes an easy to use, single click interface, which makes installing Windows applications simple and fast.

Once installed, applications integrate directly with either the Gnome® or KDE® environments. Just click and run your applications directly from your Linux start menu. Launch Windows-format file attachments directly from within your Linux mail program, save data files on your local file system, print from your Windows applications via your Linux printer drivers. You work exactly as you would in Windows, but with the full freedom of Linux.

the Best of Windows for Linux

Runs on Any Linux Distribution
CrossOver products run on any x86 Linux distribution. Tested on Red Hat, SuSE, Mandrake, Debian, and Xandros.
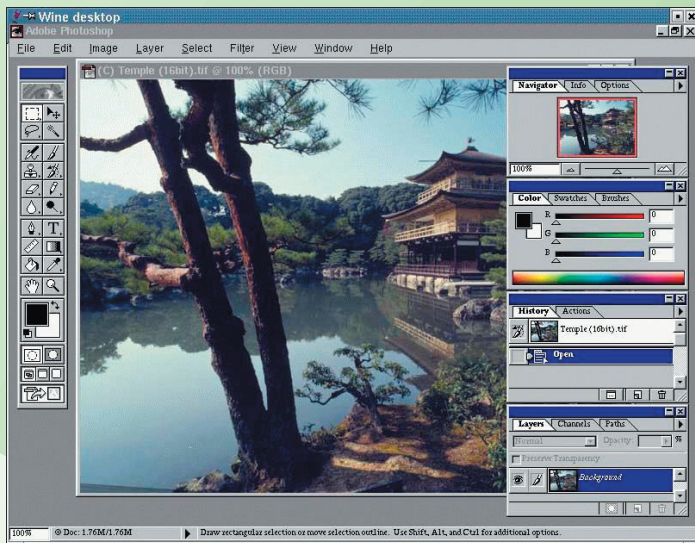

No Need For MS Windows® Operating System
CrossOver is a complete replacement for the Windows operating system for your Linux PC. Unlike other emulator solutions, CrossOver requires no MS OS license. Once you've installed CrossOver, just install your Windows applications normally, and you're up and running.

Easy Windows Installer
Install Windows software under Linux quickly and easily. You use your normal Windows installation CDs — CrossOver handles configuring your programs to run under Linux.

Superior Support
Unlike using free Wine to run Windows applications, when you buy CrossOver, you're entitled to 6 months support from CodeWeavers' well-respected support team. Not only that, but you also receive 6 months of free product upgrades as well. Volume licenses receive 1 year of both support and upgrades.

Supported Applications
CrossOver Office is capable of running a wide range of Windows software. Officially supported packages include:

- Microsoft Office XP
  - Microsoft Word®
  - Microsoft Excel®
  - Microsoft Powerpoint®
